

HOT OFF THE PRESS

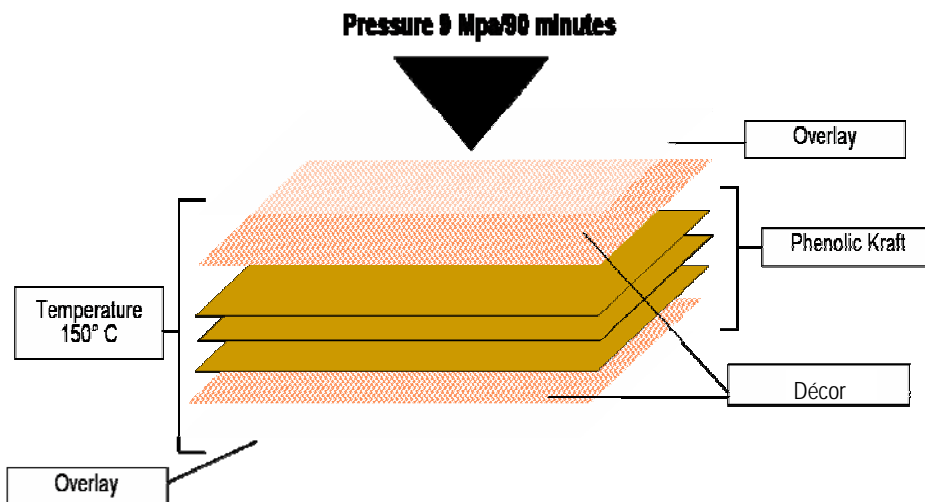

New Brisbane Warehouse Forges Ahead

Work has commenced on ABET Queensland's new warehouse and office complex, designed by Architects AJ+C, due for completion late 2007. The exterior facade will feature a sunshade louvre system in MEG DigitalPrint. The new complex is located at Larapinta, Aboriginal for "running water", which inspired Jackie Dean's images for the louvers and art in the building. Stay tuned for the December issue of "im^{print}" which will feature images of the completed project.

FEATURED PRODUCT

Stratificato

Stratificato consists of multiple layers of cellulose fibrous material (normally paper) impregnated with thermosetting resins and bonded together by a high pressure process. The **core** of Stratificato is made up by layers of kraft paper impregnated with phenolic resins and can be either chocolate brown and black. The décor paper, impregnated with melamine resins forms the **surface** layer of Stratificato. The product is then subjected to high pressure (9MPa) and heat (150oC) in special presses in which polycondensation of the resins take place, creating a very strong bond through its thickness.

PRODUCTS IN PRACTICE

Stratificato - MEG (Material Exterior Grade)

Stratificato - MEG has been specifically developed for exterior applications with DigitalPrint you can now create your own designs. Please contact us for more information.

INTERNATIONAL NEWS
